

Base of new main entrance staircase

Construction of link bridge between main entrance and new car park

Terrazzo flooring being laid in main entrance foyer

Floors, walls and internal fitout

As we edge closer to the end of year, the new clinical services building is now water tight and internal fitout is well underway. Stunning white terrazzo flooring is currently being laid in the main entrance and the new reception area is starting to take shape.

Works are currently in progress for the internal courtyards. A place to connect with nature while inside the facility, the courtyards will span across multiple floors and will provide staff, patients and visitors a healing environment to reflect, relax and unwind.

The structure is now in place for the link bridge from the future P3 car park to the new main entrance. In a matter of weeks, we will be able to see the completed pedestrian walkway.

Ongoing refurbishment works within existing hospital buildings has seen the final touches being placed on the Pathology Lab. The team is excited to move in to the new space and can't wait to continue work in a world-class lab.

Our builders have advanced works on the dental centre set to open in early 2022. A recent delivery has seen the installation of special dental chairs that will ensure comfortable care for patients and perfect postures for staff.

It's all hands on deck to bring the future of healthcare to Campbelltown Hospital. As we move closer to opening the new building, we can't wait to show you the new space.

Get creative with reused materials

Our builders are always looking to reduce waste and recycle. With a wide range of materials on site, our waste management plan ensures all resources that can be recycled are given a second lease on life. With the support of a local indigenous company, Indigi Bins Australia, construction and demolition waste is separated for recycling and general waste. This means surplus rock, soil and other excavated materials can go on to be used in other projects.

By conserving energy, water and waste where possible, we thank our contractors in keeping the site clean and green.

Celebrate National Recycling Week with us from 8 to 15 November!

Get creative and use materials you'd usually pop into your yellow recycling bin to construct a miniature version of our new clinical services building. Boxes, milk cartons, cans and paddle pop sticks – there's lots of options to recreate the structure and then get arty with decoration of your creation. Be sure to take a photo of your masterpiece and upload it to Facebook with the project hashtag #CampbelltownRedevelopment and tag @CampbelltownHospital, or email us via the address below.

Farewells and final touches

The Pathology Lab expansion is now complete, with staff planning to move into the new space over the coming weeks. The works have doubled the size of the previous lab and will provide room for additional equipment to support staff and assist with testing timeframes.

Taking just under a year to complete, Project Manager in charge, Seth Jameson worked tirelessly to ensure works were completed in time to support the additional services set to come to Campbelltown Hospital as part of the redevelopment. Having worked on the project for the past two and half years, Seth has been a valuable asset to the team.

In true project management style, Seth's organisational skills were impeccably timed. As an expecting father-to-be, the finished works aligned perfectly with his departure back home to Dallas, Texas.

Although we will miss his respectful nature and impeccable problem solving, we wish him all the best for this next chapter.

The Pathology Lab and Project Team are incredibly grateful for all Seth's hard work in coordinating such an important component of the redevelopment project.

The Pathology Team checking out their brand new space

Beds and bean bags

It has been a busy month of beds and bean bag trials for our Furniture, Fittings and Equipment (FF&E) team. From selecting special bean bags for the mental health units, to choosing the right patient beds for the new inpatient units, it was a task that required 'sleeping on the job'.

Staff were invited to test and trial a number of bed suppliers to help select the best patient beds for the new clinical services building. With patient health and comfort in mind, distributors showcased the special electronic controls, ease of manual handling and enhanced comforts so staff could make an informed decision. The FF&E team are now tasked with reviewing the feedback and ordering a variety of beds, including bariatric, mental health, birthing and standard.

To continue planning for the fitout of the mental health units, special bean bags set to enhance the care and comforts of mental health users were trialled. This piece of furniture provides a calming and relaxing sensation and is a tool that can help people feel safe and secure. Chosen to aid in the care of individuals, the special bean bags will be durable, made from heavy materials and easily cleaned. After all, who doesn't love a bean bag!
