

Shedding our site sheds

Under construction since 2018, our new clinical services building at Campbelltown Hospital is nearing completion! With the recent removal of most site sheds from the construction site, final works are busily underway in readiness for the future main entrance drop-off zone and new P3 public car park becoming operational from Monday 6 June.

If you've been to the hospital recently, you may have noticed updated campus signage being installed. An important component of preparations for the new building becoming operational, these form part of a broader wayfinding strategy incorporating both internal and external signage, which will help direct patients, staff and visitors around the site.

An exciting feature of the new building is the community hub on Level 0. Adjacent to the outdoor courtyard and eatery, the space has a children's zone with soft fall flooring and quiet meeting areas (pictured) to provide places to relax, reflect and connect.

With works wrapping up on the outside and final touches being made on the interior, it's not long to go until we welcome staff and the community into the new hospital building over a busy 12-week commissioning period. Stay tuned for more details on which services will move, and when, in our next edition. And be sure to follow Campbelltown Hospital on Facebook for the latest news and updates.

Get a sneak peek!

We're excited to be giving 300 community members the chance to get a behind-the-scenes look at our new hospital building before it opens to the public!

Be one of the first to see some of the exciting new spaces and experience the view from the upper levels on Saturday 4 June when we host a series of 45-minute tours throughout the building.

Bookings are essential and spaces are limited. Head to [Eventbrite](#) to secure your place!

Bookings close at 4pm on Thursday 2 June unless booked out earlier.

Grant Isedale and Board Chair Sam Haddad in Hospital Street

Welcoming, healing spaces

As construction nears completion, the District's Board Chair Sam Haddad and Chief Executive Amanda Larkin recently joined members of the Executive Leadership team to view the new building.

The group toured key areas, including the Emergency Department, mental health units and children's unit, seeing the various stages of completion and getting a feel for how patients and consumers will experience the building.

Camden and Campbelltown Hospitals General Manager, Grant Isedale, said while the new building was grand in scale and design, the arts elements and colour scheme provided a welcoming and healing space for staff, patients and visitors alike.

"We're really excited to be so close to construction completion and to be able to soon showcase the new building and its unique features to staff and the general public," Mr Isedale said.

New spaces for newborns

It's an exciting time for parents and parents-to-be as we get closer to moving into the new hospital building.

A range of key women's health services, including birthing suites and the maternity unit, will be relocated into significantly enhanced spaces, with opportunity for further expansion as our community grows.

The building will also be home to dedicated children's units and a special care nursery to care for our youngest patients.

With moves scheduled from mid-July, we're excited to soon welcome our first baby born in the new hospital building!

New baths in the future birthing suites

Special welcome

Local Aboriginal Elders and community members recently visited the site to assist with the installation of the special welcome stone. Selected at Appin Quarry, the welcome stone will feature Indigenous language inviting you onto Dharawal Land.
