

Welcome to the September edition of the Campbelltown Hospital Redevelopment Newsletter. Planning and design are progressing well and running to schedule. We're excited to announce that we have just completed the Schematic Design phase of the project (Figure A). The Schematic Design phase outlined the location of the floor plates, departments and wards, and the broad architectural design.

The Project's State Significant Development Application has been on public exhibition through the Department of Planning and Environment during September 2018 giving the general public and stakeholders an opportunity to provide commentary and feedback around planning and design. Completion of these activities allows us to progress to tender for construction of the main works, which is anticipated to start early in 2019.

Next steps includes:

- Awaiting outcome of the main works tender process.
- Detailed design-making decisions on interior and exterior building materials and finishes, furniture and equipment, lighting, electrical and plumbing systems.
- Continue focus groups and stakeholder consultation through targeted tours.

## Early & Enabling Works Update

Work is starting to soon to prepare for the excavation of the new clinical services building. The following services will be relocated by the end of 2018 to Building D (Outpatients):

- Discharge Transit Unit and associated drop off/pick up area
- Patient transport
- Equipment loan pool
- In preparation for the closure of the staff cafeteria in October, an additional indoor and outdoor staff seating will be available and is co-located with the Fresh+Café.

## Community Consultation

Members of the community received the latest information on the planned paediatric services in the Campbelltown Hospital redevelopment and offered their feedback at a consumer focus group and drop-in stall on 5 and 6 September.

**Thank you** to everyone that attended the focus group and drop-in sessions. The sessions were well attended and we received excellent and valuable feedback.

We look forward to the opportunity to showcase the redevelopment and provide further information and we will continue to host similar events into the future.

## Car Park Update

We are pleased to announce that car parks 2 and 3 (located adjacent to Appin Road, behind Waratah House) are now complete and ready for occupation. The opening of these car parks enables other works to commence across the campus, such as the new multi-storey car park location.

Our commitment to maintain available car parking capacity throughout the redevelopment project means car park works across the campus will continue for the coming months.

We would like to thank all patients and visitors for their continued patience while the redevelopment is underway. For your continued safety, please:

- Adhere to the speed limit of 10 km/hr within the hospital grounds at all times.
- Follow the allocated pathways around the campus.
- Refer to signage and follow traffic control and wayfinding directions.

## What's Coming Up!

### Arts, Culture & Health Partnership

Campbelltown Hospital has partnered with Campbelltown Arts Centre and Western Sydney University. This collaboration will provide an exciting opportunity for staff and the community to come together to participate in incorporating arts and culture in the redevelopment project. More details to come next month.
